

JCAD RISK Health & Safety Assessment
(developed on the JCAD RISK technology platform)

A large circular image in the center of the page. It features a black and white photograph of a skyscraper with a grid of windows, viewed from a low angle looking up. In the bottom right foreground, the tip of a dark leather shoe with white stitching is visible.

JCAD Risk Health & Safety Assessment

BENEFITS

JCAD Health & Safety Risk Assessment module capitalises upon the existing functionality of the JCAD RISK application. Through additional customisation organisations can now actively manage their health & safety risk assessments as well as their operational and strategic risks.

KEY FEATURES

- Report on any specific areas within your organisation
- Store data and supporting documentation in one place
- Take advantage of a proven technology
- Web based for global reach

OVERVIEW

JCAD RISK is already successfully in use at many organisations. Due to the customisable nature of the application it is now able to be used as a single, central repository for all Health & Safety Risk Assessments.

FUNCTIONAL SUMMARY

Details of each risk assessment are recorded against departments within the organisation structure and the associated risk assessment documents attached within the diary/action section. Any additional controls or recommendations (action plans) can be recorded and assigned accordingly with target dates and review periods.

Guidelines and safe working practice documents can also be stored electronically against departments, risks or control measures. This ensures that all information is easily accessible and up to date.

The system can also be set up to alert the person responsible for updating and reviewing the risk assessments at specific intervals, generally on an annual basis, and also to regularly monitor and review control measures (action plans).

The Risk Assessment details are entered, including the assessment title, details, to whom it is assigned, review period and existing & residual risk levels.

Actions plans, controls or recommendations can be recorded and tracked. Ownership of each action can be assigned to other named individuals in the organisation – review periods and target dates can also be tracked and linked into the diary/action section.

Reports are available as standard in JCAD RISK – additional reports can be created to suit the particular needs of each client.
